

The CABRIO pavilion is equipped with a **retractable roof** giving the option of either an open sky or complete protection from the elements. Manufactured with heavy-walled aluminum, the pavilion structure will withstand moisture, rain, wind and sun. The roof and curtains are constructed with Sunbrella® fabric, composed of **100% solution-dyed acrylic** fibres that lock color deep inside the fabric offering excellent weather resistance. Sunbrella® fabrics are guaranteed for 8 years against fading. The structure is designed with a double rail system that offers different choices of curtains.

Silver	TS4651					
White	TS4604					

Other Sunbrella® colors available upon request.

Lighting and Heating

LIGHTING

This eco-friendly lighting uses a high-powered light-emitting diode (LED) with an extreme long life of more than 50,000 hours. With very low power consumption, barely 5.5W, this sophisticated high-tech lighting appliance dispenses beautiful warm white light.

HEATING

The W-Series Heater incorporates a specially designed electric quartz heating element that produces safe infrared radiant energy. Radiant energy is only absorbed by solid objects and is not wasted heating the air. In addition, Infratech heaters do not emit harmful ultraviolet rays.

Since there are no open flames or carbon monoxide emissions, mounting clearance requirements are minimal. W-Series fixtures can be installed at lower mounting heights, under canvas awnings, and in interior locations. Adjustable swivel mounts and short angle braces allow the fixtures to seamlessly blend in with any patio decor. The parabolic reflector is made of a special corrosive-resistant alloy.
